Hi Christina,

Will you please authorize the following rush search a special case which is due?

Thanks,

Jennifer

STIC:

Please search oligonucleotides of at least 22 nucleotides in length from 11357 to 12736 of SEQ ID NO: 35 from application 10/672787 in pending and commercial databases.

Thanks,

Jennifer Graser Primary Examiner Art Unit 1645 REM 3B09 2-0858

```
CC The invention relates to an isolated nucleic acid comprising any one of cthe 6213 antisense sequences given in the specification where expression co of the nucleic acid inhibits proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid cenciding a polypeptide whose expression is inhibited by the antisense cutleic acid; (2) a host cell containing the vector; (3) an isolated contisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular contisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular contiseration; (7) identifying a compound that influences the activity of a gene in an operon required for centurized for proliferation, or that has an activity against a biological pathway contisered for century in which a proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological cor a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene compound's activity; (11) a culture comprising strains in which the gene compound's activity; (11) a culture comprising strains in which the gene compound's activity; (11) a culture comprising strains in which the gene compound's activity; (12) determining the extent compound that inhibits proliferation of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required correctly programs, or for screening candidate molecules for rational correctly programs. The antisense and antiscover succession activity activity of screening backets molecules for rational contents of the carget of a condidate molecules for rational contents of the carget of the carget acids are useful for the ca
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an isolated nucleic acid encoding an Moraxella catarrhalis polypeptide. The nucleic acid is useful for preparing a composition for diagnosing, preventing or treating infection caused by Moraxella catarrhalis. The present sequence represents DNA encoding a M
